SUMMARY
CHART

Marmo Venato Imperiale | 3D Finish

We design and manufacture ceramic tops, made from large-format Italian slabs.

They are concrete solutions which combine Italy's extensive ceramic tradition with cutting-edge sustainable technologies in order to offer a new interpretation: the kitchen as a space for socializing, harmony, and relaxation.

02.

CONTEMPORARY
THINKING

BRAND

7

Santafiora Avorio | 3D Finish

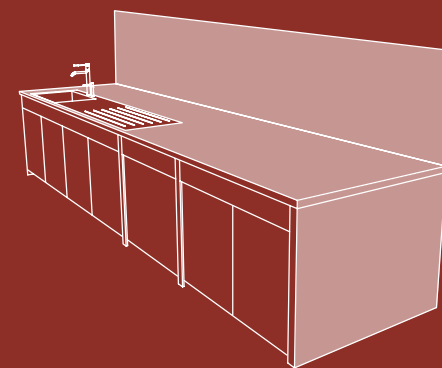

ABITUM tops bring the kitchen to life and help create a place, a dimension, which showcases who we are and what we value. Ceramic tops with unmatched technical performance, composed of entirely natural raw materials.

Easy to clean, scratch- and heat-resistant, non-absorbent, and resistant to acids and contact with foodstuffs.

Scratch resistance is a key quality of all ABITUM finishes. The POLISHED finish, while offering performance which meets or exceeds other alternative materials with a high-gloss finish which are used as furniture surfaces, is more sensitive to scratching than the other finishes.

ABITUM is designed to provide a long service life while retaining all its characteristics.

Offered in multiple different finishes, it guarantees full design freedom for stylish and aesthetic combinations.

- KITCHEN COUNTERTOPS
- ISLANDS AND PENINSULAS
- BACKSPLASHES AND UPSTANDS
- END PANELS
- INTEGRATED SINKS
- TABLETOPS

When creating kitchen compositions, at the joints between different slab portions, differences in color and/or graphics may be visible depending on the chosen texture.

As the product is made from natural raw materials, it may exhibit slight color variations between different production batches.

The samples and tops on display are therefore provided purely by way of example.

Marble Beige Rigato | Polished Finish

Combining high technological quality with a constant focus on the environment, with the goal of supporting Italian know-how around the world.

It is a continuous journey, where Italian design and quality stand alongside compliance with the strictest international production sustainability standards, because they are an integral part of our values and cut across all planning decisions.

It is a real and possible process, whose priorities include protecting our customers, who are also free to make their choice on the basis of the social and environmental quality of the products.

02.

**BETTER SOLUTIONS,
BETTER LIVING**

Each and every one of ABITUM's actions is guided by a strong commitment to reducing our environmental impact, led by the use of up to 40% pre-consumer recycled content and production based on ever-greater use of sustainable resources.

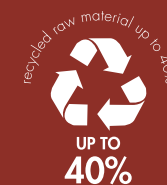

It is a constant and continuous journey towards innovation and excellence, which means developing virtuous processes and making concrete investments for a better future.

ABITUM is integrated design; it is harmonious wellbeing between the elements and those who interact with them in the intimacy of the domestic setting.

ABITUM's wide range of ceramic tops are designed to enhance the elements they are paired with. Numerous solutions which allow designers to pair the kitchen countertop and kitchen tabletop to make both stand out.

It is possible to make continuous pairings able to provide uniformity, minimalism and design rigor, but it is also possible to combine multiple finishes to make your environment unique and personalized.

Design and functionality are the values on which ABITUM's success is based.

05.

**TECHNICAL
CHARACTERISTICS**

CHARACTERISTICS

Easy to clean and maintain

Suitable for contact with foodstuffs

Compact surface, zero surface porosity (average water absorption: 0.1%)

Dimensional stability

Suitable for indoor and outdoor applications

Resistant to heat

Hygienic surface

Resistant to staining*

Resistant to abrasions**

Resistant to detergents***

Resistant to chemicals

Resistant to thermal shock

Resistant to freeze-thaw

Resistant to humidity

Resistant to UV rays

Resistant to deflection

Resistant to scratches****

* Products liable to cause stubborn stains must be promptly removed from polished surfaces.
 ** ABITUM slabs with polished finish, while resistant to deep abrasion, are more susceptible to surface scratching.
 *** On polished surfaces, highly aggressive cleaning products (such as bleach) must be removed quickly.
 **** With the exception of scratches caused on all surfaces by ceramic knives.

PRODUCTION PROCESS

ABITUM ceramic tops are composed of natural raw materials which undergo a sintering process at over 1200 °C.

The entire production process takes place in compliance with the most stringent environmental standards.

All of the water used and 91% of raw material waste scraps are recycled and reused in subsequent production batches.

A particular focus is also placed on systems to eliminate emissions of odors into the surrounding environment.

DISTINCTIVE PROPERTIES

- The natural origin of the raw materials used and the innovative production technologies lend ABITUM tops distinctive characteristics:
- Bacteriostatic surfaces: limits the proliferation of mold and bacteria
 - High resistance to heat: it is possible to place hot pans, crockery etc. on the tops without the use of trivets
 - Suitable for direct food contact: they do not undergo treatments after production, and so do not release any substances
 - Resistance to staining: being free of porosity, they are non-absorbent, facilitating the removal of any residue
 - Resistance to scratching: they are highly resistant to scratching, being sensitive only to material of a similar hardness (such as ceramic knives, for example)
 - Durability: the production standards and the quality of the raw materials ensure that the aesthetic and performance standards of the product are maintained over time

Overall, the characteristics of ABITUM tops make them more suitable and higher performance than stone, marble, quartz, solid surface, and laminate countertops installed in either indoor or outdoor environments.

They are particularly suitable for use as kitchen countertops, and are certified safe for food contact, both during preparation and after cooking.

As they are made from natural raw materials, the product may exhibit slight color variations between different production batches.

The samples and tops on display are therefore provided purely by way of example.

POLISHED SURFACES *

Polished products are created through a post-firing polishing process, which makes them more sensitive to scratches and staining than the natural surfaces. This should be considered a typical characteristic of the finish.

All the other properties, such as the heat resistance, remain unchanged.

ABITUM polished surfaces nevertheless offer performance which meets or exceeds other natural and artificial materials used for horizontal furniture surfaces.

It is in any case recommended not to create integrated sinks with polished finishes, as these elements are more exposed to scratches created by contact with crockery, pans etc.

Never use scouring powder/creams when cleaning polished ABITUM surfaces.

Products liable to leave stains must be promptly removed or they could leave residue or haze on polished products.

On polished products, it is advisable to use trivets and cutting boards for food preparation, as rubbing of pans, dishes, knives etc. on these surfaces could cause surface scratching.

As such, scratches found on polished surfaces are not considered defects and any such claims shall not be entertained.

EASE OF CLEANING

To clean ABITUM surfaces, just use hot water with the addition of a neutral cleaning product if required, for example detergents commonly used for cleaning kitchen countertops and domestic appliances, with the aid of a microfiber cloth or soft sponge.

For further details and specific indications, consult the cleaning and care technical manual included in the packaging of the ABITUM top and available on the website www.abitum.it , or else view the [video tutorials](#) by scanning the QR codes below.

Epoxy adhesive residue

Limescale haze

Protective wax dot residue

Food stains

Metal marks

Rust stains

Silicone residue

Residue left by suction cup handling

ABITUM is a sustainable project, developed entirely in Italy by leading companies in the furniture industry, created to exclusively offer ceramic surfaces with refined design and high-quality standards.

Founded with the desire to bring together different excellences in Italian design and manufacturing, ABITUM offers kitchen countertops and tabletops for integrated interior design projects which are refined, modern, and of the highest quality.
